What is Battery Cycle Life Test | Large Battery
Software testing life cycle is a multi-step testing procedure that is carried out to certify a software product. It defines a series of phases that are performed by software engineers to test that the software is free of bugs and faults. You might already know that when developing a software, it goes through phases of a software development life cycle (SDLC).

Software Testing Life Cycle - A Beginner's Guide
Software Testing Life Cycle (STLC) is a sequence of specific activities conducted during the testing process to ensure software quality goals are met. STLC involves both verification and validation activities. Contrary to popular belief, Software Testing is not just a single/isolate activity, i.e. testing. It consists of a series of activities carried out methodologically to help certify your software product.

STLC (Software Testing Life Cycle) Phases, Entry, Exit ...
There is no one universal software testing life cycle or test process, but there are common sets of test phases / activities which enable testing to achieve its established objectives. Though the phases have been presented sequentially, they need not be carried out in the specified order.
