The aim of this study is to determine PstI polymorphism in the exon 6 region of the Pituitary-specific Transcription Factor (Pit-1) gene which is regarded as a candidate gene in mammals in regulating growth and development in 6 different goat breeds reared in Turkey. PstI polymorphism in Pit-1 gene (450 bp) was investigated by Restriction Fragment Length Polymorphism (RFLP) method in a total of 217 goats including 36 Hair, 18 Angora, 43 Kilis, 37 Honamlı, 46 Halep and 37 heads of Saanen breeds.

A hands-on introduction to programming with Visual Basic for DOS, including a disk containing all the program code covered. This book takes a painless approach that first-time users will find reassuring--a quick-start, step-by-step tutorial on object-oriented programming; dozens of easy-to-follow sample programs; helpful icons highlighting special tips and warnings; and a rich supply of screen images.

This work has been selected by scholars as being culturally important, and is part of the knowledge base of civilization as we know it. This work was reproduced from the original artifact, and remains as true to the original work as possible. Therefore, you will see the original copyright references, library stamps (as most of these works have been housed in our most important libraries around the world), and other notations in the work. This work is in the public domain in the United States of America, and possibly other nations. Within the United States, you may freely copy and distribute this work, as no entity (individual or corporate) has a copyright on the body of the work. As a reproduction of a historical artifact, this work may contain missing or blurred pages, poor pictures, errant marks, etc. Scholars believe, and we concur, that this work is important enough to be preserved, reproduced, and made generally available to the public. We appreciate your support of the preservation process, and thank you for being an important part of keeping this knowledge alive and relevant.

This guide contains SRI's "List of Lists"--a comprehensive listing of the Internet special interest group mailing lists. Guidelines are provided for accessing and participating in the special interest groups as well as for starting your own special interest group mailing list.

A coverage of the Transputer Development System (TDS), an integrated programming environment which facilitates the programming of transputer networks in OCCAM. The book explains transputer architecture and the OCCAM programming model and incorporates a TDS user guide and reference manual.

This work focuses on research on the molecular biology and genomics of lactobacillus. Written by an international team of scientists the volume is an essential reference for all dairy technologists, microbiologists and biotechnologists in the academic and industrial sectors.

Women and Education, 1800-1980 examines and celebrates the lives, aims, and achievements of six British women educational activists within nineteenth- and twentieth-century history: Elizabeth Hamilton, Sarah Austin, Jane Chessar, Mary Dendy, Shena Simon and Margaret Cole. Employing a biographical approach, Jane Martin and Joyce Goodman adopt existing feminist and historical models to explore how these women resisted gender roles and combined their public lives with private commitments. As individuals, these women were very different personalities: as a group they show how organised women made a substantial contribution to public life and changed philosophy, policy and practice. Women and Education is situated within the tradition of feminist engagements with recovering and reclaiming 'forgotten' female figures in history. By bringing the lives and actions of these female reformers to the forefront, Martin and Goodman not only offer fresh perspectives on the relation between theory and practice in education, but also give a critical new insight into the accomplishments of women in the past.

Bob Dylan, Willie Nelson, Emmylou Harris, U2, Peter Gabriel, and the Neville Brothers all have something in common: some of their best albums were produced by Daniel Lanois. A French-speaking kid from Canada, Lanois was driven by his innate curiosity and intense love of music to transcend his small-town origins and become one of the world's most prolific and successful record producers, as well as a brilliant musician in his own right. Lanois takes us through his childhood, from being one of four kids raised by a single mother on a hairdresser's salary, to his discovery by Brian Eno, to his work on albums such as U2's The Joshua Tree, Bob Dylan's Time Out of Mind, and Emmylou Harris's Wrecking Ball. Revealing for the first time ever his unique recording secrets and innovations, Lanois delves into the ongoing evolution of technology, discussing his earliest sonic experiments with reel-to-reel decks, the birth of the microchip, the death of discrete circuitry, and the arrival of the download era. Part technological treatise, part philosophical manifesto on the nature of artistic excellence and the overwhelming need for music, Soul Mining brings the reader viscerally inside the recording studio, where the surrounding forces have always been just as important as the resulting albums. Beyond skill, beyond record budgets, beyond image and ego, Lanois's work and music show the value of dedication and soul. His lifelong quest to find the perfect mixture of tradition and innovation is inimitable and unforgettable.

Is there anything more entertaining, inspiring and instructive than observing art? Yes, it is watching the people interacting with this art. This book may forever change your approach to art as it urges you to always consider both the work and the response. Because ultimately artists create, but we - the audience - complete the picture.A Spectator is an Artist Toois a visual essay about human behaviour around art: what happens when we are confronted with something immensely beautiful, challenging, or puzzling? Art historians only study objects, but how these objects are received is also worthy of our attention.The book also captures how art museums are changing, as they draw increasingly diverse audiences. The way the museum visitors responds to art is becoming more casual and creative - but also more swift or even banal. This shift is increased by a whole new breed of Instagram-friendly 'museums' worldwide, attracting experience-hungry visitors with immersive exhibitions defined by their Instagrammability.
