Treatment of Malaria in Pregnancy | NEJM

Malaria during pregnancy is associated with abortion, congenital malaria, infant anemia, intrauterine growth restriction, low birth weight, preterm delivery, and stillbirth [ 7 ].

Impact of Malaria in Pregnancy on Risk of Malaria in Young ...

Executive Summary. Over the past 10 years, knowledge of the burden, economic costs, and consequences of malaria in pregnancy has improved, and the prevalence of malaria caused by Plasmodium falciparum has declined substantially in some geographical areas. Furthermore, studies outside of Africa have increased the evidence base of Plasmodium vivax in pregnancy.

Malaria in pregnancy - The Lancet

The number of journal articles related to malaria in pregnancy increased from 41 in the 1960s, to 706 in the 1990s, and 1,895 between 2000 and 2009, and the variety of themes has increased over time. English-language articles were sourced from 737 different journals.

The Malaria in Pregnancy Library: a bibliometric review

The adverse effects of malaria in pregnancy are caused by systemic infection (miscarriage, stillbirth, preterm birth, maternal and fetal mortality) and from paratitation (fetal growth restriction, fetal and maternal anemia, susceptibility of the infant malaria [4].

Malaria in Pregnancy

Abstract. Background: Malaria in pregnancy carries a proven huge health burden; however, the economic challenges have not been properly evaluated in Nigeria. Methodology: The study was a descriptive cross-sectional hospital-based approach. A structured questionnaire was used to collect microeconomic data from pregnant women, on the medical and nonmedical cost of malaria to them.

The economic burden of malaria in pregnancy: a cross ...

Malaria during pregnancy remains a major public health concern in tropical and subtropical countries. Moreover, malaria is increasingly associated with unwanted pregnancy outcomes such as an increased risk of abortion, stillbirth, premature delivery, and low-birthweight infants.

The Prevalence of Malaria among Pregnant Women in Ethiopia ...

Malaria in pregnancy caused by Plasmodium falciparum is associated with maternal and fetal anemia, stillbirth, preterm birth, and fetal growth restriction [ 2|7 ], these latter two contributing to low birth weight (LBW).

Malaria Journal | Articles

Malaria Journal is aimed at the scientific community interested in malaria in its broadest sense. It is the only journal that publishes exclusively articles on malaria and, as such, it aims to bring together knowledge from the different specialties involved in this very broad discipline, from the bench to the bedside and to the field.

Malaria Journal | Home page

Abstract Malaria in pregnancy is one of the major causes of maternal morbidity worldwide, and leads to poor birth outcomes. There is a complex interaction between pregnancy and parasite;all favour the parasite and disadvantage the pregnant woman. Women who are semiimmune lose much of that immunity.

REVIEW: Malaria in pregnancy - Whitty - 2005 - BJOG: An ...

The severity of malaria in pregnancy is thought to be due to general impaired immunity plus a diminution of acquired immunity to malaria in endemic areas. Placental malaria occurs where Plasmodium falciparum -infected erythrocytes accumulate in the intervillous space of the placenta but may be rare or absent in the peripheral circulation.

Malaria in Pregnancy. Learn about Malaria in Pregnancy ...

Malaria during pregnancy is a major cause of maternal morbidity worldwide and leads to poor birth outcomes. Pregnant women are more prone to complications of malaria infection than nongravid women. Prevention involves chemoprophylaxis and mosquito avoidance. Treatment involves antimalarial drugs and supportive measures.

Malaria in pregnancy: Prevention and treatment - UpToDate

Malaria infection during pregnancy is a significant public health problem with substantial risks for the pregnant woman, her fetus and the newborn child.. The symptoms and complications vary according to malaria transmission intensity in the given area and the individual's level of acquired immunity.

Abstract | Malaria in Pregnancy

Malaria during pregnancy poses substantial risk to the mother, her fetus, and the neonate; the infection contributes to as much as 15% of maternal anemia, 14% of low birth weight infants, 30% of preventable low birth weight, 70% of intrauterine growth retardation, 36% of premature deliveries, and 8% of infant mortality.

Malaria during Pregnancy: Epidemiology, Current Prevention ...

Malaria in pregnancy increases the risk of maternal and fetal anaemia, stillbirth, spontaneous abortion, low birth weight and neonatal death. Infants born to mothers living in endemic areas are vulnerable to malaria from approximately 3 months of age, when immunity acquired from the mother starts to wane.

Protecting malaria high-risk groups

With regard to malaria, perceived susceptibility is related to two factors: (1) the perceived propensity to develop clinical malaria due to idiosyncratic features of the person (pregnant women, children, immune-compromised persons); and (2) the perceived level of exposure.

Malaria in Pregnancy: What Can the Social Sciences Contribute?

Pregnancy-associated malaria (PAM) or placental malaria is a presentation of the common illness that is particularly life-threatening to both mother and developing fetus. PAM is caused primarily by infection with Plasmodium falciparum, the most dangerous of the four species of malaria-causing parasites that infect humans.

Pregnancy-associated malaria - Wikipedia

Pregnant women with clinical malaria experienced an increased risk of anemia, which may have a deleterious impact on infant health. These findings may be useful for guiding maternal health programs in vivax endemic settings, as well as for malaria elimination activities.
