On October 14-19, 1990, the 6th International Conference on the Conservation of Earthen Architecture was held in Las Cruces, New Mexico. Sponsored by the GCI, the Museum of New Mexico State Monuments, ICCROM, CRATerre-EAG, and the National Park Service, under the aegis of US/ICOMOS, the event was organized to promote the exchange of ideas, techniques, and research findings on the conservation of earthen architecture. Presentations at the conference covered a diversity of subjects, including the historic traditions of earthen architecture, conservation and restoration, site preservation, studies in consolidation and seismic mitigation, and examinations of moisture problems, clay chemistry, and microstructures. In discussions that focused on the future, the application of modern

technologies and materials to site conservation was urged, as was using scientific knowledge of existing structures in the creation of new, low-cost, earthen architecture housing.

This publication identifies the main regulatory obstacles of the following transport sectors in Mexico: road transport, railways, ports, border crossing, and airway passengers. The report also offers recommendations to improve the quality of the regulatory framework of these sectors.

The telephone marks the place of an absence. Affiliated with discontinuity, alarm, and silence, it raises fundamental questions about the constitution of self and other, the stability of location, systems of transfer, and the destination of speech. Profoundly changing our concept of long-distance, it is constantly transmitting effects of real and evocative power. To the extent that it always relates us to the absent other, the telephone, and the massive switchboard attending it, plugs into a hermeneutics of mourning. The Telephone Book, itself organized by a "telephonic logic," fields calls from philosophy, history, literature, and psychoanalysis. It installs a switchboard that hooks up diverse types of knowledge while rerouting and jamming the codes of the disciplines in daring ways. Avital Ronell has done nothing less than consider the impact of the telephone on modern thought. Her highly original, multifaceted inquiry into the nature of communication in a technological age will excite everyone who listens in. The book begins by calling close attention to the importance of the telephone in Nazi organization and propaganda, with special regard to the philosophy of Martin Heidegger. In the Third Reich the telephone became a weapon, a means of state surveillance, "an open accomplice to lies." Heidegger, in *Being and Time* and elsewhere, elaborates on the significance of "the call." In a tour de force response, Ronell mobilizes the history and terminology of the telephone to explicate his difficult philosophy. Ronell also

speaks of the appearance of the telephone in the literary works of Duras, Joyce, Kafka, Rilke, and Strindberg. She examines its role in psychoanalysis—Freud said that the unconscious is structured like a telephone, and Jung and R. D. Laing saw it as a powerful new body part. She traces its historical development from Bell's famous first call: "Watson, come here!" Thomas A. Watson, his assistant, who used to communicate with spirits, was eager to get the telephone to talk, and thus to link technology with phantoms and phantasms. In many ways a meditation on the technologically constituted state, *The Telephone Book* opens a new field, becoming the first political deconstruction of technology, state terrorism, and schizophrenia. And it offers a fresh reading of the American and European addiction to technology in which the telephone emerges as the crucial figure of this age.

Countries emerging from armed conflict or authoritarian rule face difficult questions about what to do with public employees who perpetrated past human rights abuses and the institutional structures that allowed such abuses to happen. *Justice as Prevention: Vetting Public Employees in Transitional Societies* examines the transitional reform known as "vetting"—the process by which abusive or corrupt employees are excluded from public office. More than a means of punishing individuals, vetting represents an important transitional justice measure aimed at reforming institutions and preventing the recurrence of abuses. The book is the culmination of a multiyear project headed by the International Center for Transitional Justice that included human rights lawyers, experts on police and judicial reform, and scholars of transitional justice and reconciliation. It features case studies of Argentina, Bosnia and Herzegovina, the Czech Republic, El Salvador, the former German Democratic Republic, Greece, Hungary, Poland, and South Africa, as well as chapters on due process, information management, and intersections between other institutional reforms.

Brain Renaissance: From Vesalius to Modern Neuroscience is published on the 500th anniversary of the birth and the 450th anniversary of the death of Vesalius. The authors translated those Latin chapters of the Fabrica dedicated to the brain, a milestone in the history of neuroscience. Many chapters are accompanied by a commentary tracking the discoveries that paved the way to our modern understanding of the brain - from the pineal gland that regulates sleep, the fornix and mammillary bodies for memory, the colliculi for auditory and visual perception, and the cerebellum for motor control, to the corpus callosum for interhemispheric cross-talk, the neural correlates of senses, and the methods for dissections. The chapters constitute a primer for those interested in the brain and history of neuroscience. The translation, written with modern anatomical terminology in mind, provides direct access to Vesalius' original work on the brain. Those interested in reading the words of the Renaissance master will find the book an invaluable addition to their Vesalian collection. Brain Renaissance pays a tribute to the work of the pioneers of neuroscience and to the lives of those with brain disorders, through whose suffering most discoveries are made. It's an unforgettable journey inspired by the work of the great anatomist, whose words still resonate today.

Most of the technological developments relevant to water supply and wastewater date back to more than to five thousand years ago. These developments were driven by the necessity to make efficient use of natural resources, to make civilizations more resistant to destructive natural elements, and to improve the standards of life, both at public and private level. Rapid technological progress in the 20th century created a disregard for past sanitation and wastewater and stormwater technologies that were considered to be far behind the present ones. A great deal of unresolved problems in the developing world related to

the wastewater management principles, such as the decentralization of the processes, the durability of the water projects, the cost effectiveness, and sustainability issues, such as protection from floods and droughts were intensified to an unprecedented degree. New problems have arisen such as the contamination of surface and groundwater. Naturally, intensification of unresolved problems has led to the reconsideration of successful past achievements. This retrospective view, based on archaeological, historical, and technical evidence, has shown two things: the similarity of physicochemical and biological principles with the present ones and the advanced level of wastewater engineering and management practices. *Evolution of Sanitation and Wastewater Technologies through the Centuries* presents and discusses the major achievements in the scientific fields of sanitation and hygienic water use systems throughout the millennia, and compares the water technological developments in several civilizations. It provides valuable insights into ancient wastewater and stormwater management technologies with their apparent characteristics of durability, adaptability to the environment, and sustainability. These technologies are the underpinning of modern achievements in sanitary engineering and wastewater management practices. It is the best proof that “the past is the key for the future”. *Evolution of Sanitation and Wastewater Technologies through the Centuries* is a textbook for undergraduate and graduate courses of Water Resources, Civil Engineering, Hydraulics, Ancient History, Archaeology, Environmental Management and is also a valuable resource for all researchers in the these fields.
