Hello everyone.

Today I will explain
about socket.io in
Node JS. Socket.io is
used for real time
communication
between applications.

In chat application

Download Free Socket io Node

and some other applications you can use socket.io.

Communication between applications using socket.io is very speedy. Socket.io is also used in IOT (Internet of things) for real time object status.

Example In Node.js

Socket.io is a library that allows real-time, event-based

communication in

Node.js and browser-based applications. It uses the

implementation of

WebSockets protocol and offers some

advantages over the protocol itself. If

you're not familiar with

WebSockets,
WebSockets allows
you to communicate
between a client and
a server in a
nonstandard way.

through the cluster module.. Fedor Indutny has created a module called sticky session that ensures file descriptors (ie: connections) are routed based on the originating remoteAddress (ie: IP). Please note that this might lead to unbalanced routing, depending on the

Note: the `app.use`
(`'/static'`) line, will
expose the
`node_modules` folder
in the server, this in
order to access the
`socket.io.js` file in
`index.html`. You can
delete this line and
copy the `socket.io.js`

from the socket.io folder and copy it directly in the same directory where index.html is located, in case you don't want to expose this folder.
