Drying Hardwood Lumber focuses on common methods for drying lumber of different thickness, with minimal drying defects, for high quality applications. This manual also includes predrying treatments that, when part of an overall quality-oriented drying system, reduce defects and improve drying quality, especially of oak lumber. Special attention is given to drying white wood, such as hard maple and ash, without sticker shadow or other discoloration. Several special drying methods, such as solar drying, are described, and

proper techniques for storing dried lumber are discussed. Suggestions are provided for ways to economize on drying costs by reducing drying time and energy demands when feasible. Each chapter is accompanied by a list of references. Some references are cited in the chapter; others are listed as additional sources of information.

Covers models manufactured through 1998.

This textbook introduces undergraduate students to engineering dynamics using an innovative approach that is at once accessible and comprehensive. Combining the strengths of both beginner and advanced dynamics texts, this book has students solving dynamics problems from the very start and gradually guides them from the

basics to increasingly more challenging topics without ever sacrificing rigor. Engineering Dynamics spans the full range of mechanics problems, from one-dimensional particle kinematics to three-dimensional rigid-body dynamics, including an introduction to Lagrange's and Kane's methods. It skillfully blends an easy-to-read, conversational style with careful attention to the physics and mathematics of engineering dynamics, and emphasizes the formal systematic notation students need to solve problems correctly and succeed in more advanced courses. This richly illustrated textbook features numerous real-world examples and problems, incorporating a wide range of difficulty; ample use of MATLAB for solving problems; helpful tutorials; suggestions for further reading; and detailed appendixes. Provides an accessible yet rigorous introduction to engineering dynamics Uses an explicit vector-based

Why do we forget about people when we talk about innovation? Innovation has been a popular subject for the last years. Bruce Nussbaum, perhaps exaggerating, said "Innovation died in 2008, killed off by overuse, misuse, narrowness, incrementalism and failure to evolve. It was done by CEOs, consultants, marketeers, advertisers and business journalists who degraded and devalued the idea by conflating it with change, technology, design, globalization,

trendiness, and anything new. It was done by an obsession with measurement, metrics and maths and a demand for predictability in an unpredictable world. If so, why another book on innovation? Because it is not one more book on the subject! It is a book that does not talk about innovation, but about people. Is there anything as important as people when innovating? This book describes how to create a true culture of innovation, a culture where innovation is not an objective, but a consequence.

Ned Kelly was a thief, a bank robber and a murderer. He was in trouble with the law from the age of 12. He stole hundreds of horses and cattle. He robbed two banks. He killed three men. Yet, when Ned was sentenced to death, thousands of people rallied to save his life. He stood up to the authorities and fought for what he believed in. He defended the rights of people who had no power. Was he a villain? Or a hero? What do you think?
